

GR Corolla Armrest Kit

INSTALLATION INSTRUCTIONS

Tools needed:

- Small Pick
- Philips screwdriver
- Flat head screwdriver

Vehicle Fitment:

- 2023+ GR Corolla

1. Using a thin flat head screwdriver or pick, pry the OEM rubber pad from the center console. It will pop out from the holes around the outside.

2. Install the square plastic nuts into the 3 square holes in the center console.

3. Lay the SXTH adapter on top of the square nuts as shown below. The white text on the part should be towards the rear seats. Use one hand to hold the adapter down, then install the (3) black 1/4in screws in each hole. You will need to press fairly hard to start the thread engagement with your other hand. Get these "wrist tight" meaning don't give them more force that what your wrist can give. Do not over-tighten. The adapter should feel real snug if you try to move it.

4. Install the armrest base on top of the SXT H adapter. Line up the 4 bottom holes of the base to the adapter. Use (4) of the supplied black #6 screws. Get these snug with your wrist, do not over-tighten. Make sure the orientation of the base has the curved bottom facing the front of the car, as shown in the bottom picture.

5. Install the armrest slider piece into the base, lining up the 4 holes. The underside of this piece should nest in with the base piece. The "entry" of the slide for the armrest will face the rear of the car. Secure with supplied (4) black #6 screws.

6. Line up the bottom of the armrest with the slots of the bottom slide. Then simply push the armrest into the position you want.

7. If you purchased the insert option, simply nest the insert into the adapter. One side is tapered at an angle relative to the opposite side, so make sure to match that or it will not fall into the adapter.

Enjoy!
